ABC D SIGNS & SYMPTOMS ON DEMENTIA

Here are the ABCD signs and symptoms of dementia:

Activities of daily living
A person with dementia may be unable to do daily activities or simple tasks such as wearing clothes and may appear unkempt.

Behavioural changes
A person with dementia may become socially withdrawn and lose interest in activities. There may be changes to their mood and personality.

Cognitive decline
A person with dementia may be unable to make decisions and perform calculations. They may also be forgetful and have problems recalling the right word or name.

Orientiation
A person with dementia may find difficulty in distinguishing time, place and space.
